## WHY THIS COLLECTION?

- PEOPLE ASKED IF I COULD DO IT
- I FANCIED THE TECHNICAL CHALLENGE
- MAYBE MAKE A LITTLE CASH TOO!

## HISTORY

Over some years, I had been collecting video files off the internet of Mature ladies. I had decided to try and sell these on DVDs, and this weighed in at about 11 DVDs worth of just storing the files on the discs with no conversion. These video files could only be played on a computer of some kind with a video player—although see footnote 1 for a possible technical workaround for those without a computer

I had a number of people ask me if I could convert these files to DVD, and initially I poo-poo'd the idea, as it would come out on around 40 DVDs.

Spring forward, and someone I was in contact with asked about doing some video editing and DVD re-authoring work for them, which led to me purchasing Cyberlink's PowerDirector Ultra (version 16 at the time of writing this). Now of course, I had the means to do the video file conversion onto DVD too, so I thought I would give it a go.

## BORING TECHNICAL STUFF!

So, anyone interested in perhaps buying one or two of this converted video file collection needs to be aware of the following 'disclaimers'

- I have converted full scenes only—whereas the video files collection also has incomplete scenes, basically everything I had collected for a model even if I couldn't get all the parts that made up a scene.
- Each DVD in this collection will be very close to, or ever so slightly over, 2 hours duration. If I go much over that, the software automatically converts to a lower resolution, thus reducing the quality.
- Due to the differing ratios of the video files (some 4:3, some 16:9, some non-standard), some of these files when converted will have black bars to top and bottom, or both sides, or even a black surrounding frame. I have used PowerDirector power tools to correct this as much as possible.
- I have not tinkered with the video files in any way—just converted them onto DVD, so any flaws in the original video files will be present on the DVD ( and there are some, like no soundtrack, or video 'glitches', or other 'artifacts'.
- All of the original video files were slightly less than PAL DVD resolution, so they have been 'upscaled' to PAL DVD by the software.

### Footnote 1:

There is an external USB drive available, called the LiteOn EBAU108, which has a feature called Link2TV. If your TV is a modern-ish one which has a USB port, it is quite likely that you could get one of these and play the video files this way. I bought one to try it and it worked flawlessly for me. I am not guaranteeing that it would work for you!
